

SYSTEM FOR FLOOD PREVENTION 2

Project title	System for flood prevention 2	
Sector	Innovation sector	
Location	Sarajevo	
Project background	In the last 10 years the floods became more frequent and caused the huge damages all over the world, measured in billions of Dollars. There were also a lot of victims caused by the floods.	
Project status	All technical solutions are completed. Because the floods are not the same in the different areas, for the each area a specific project must be developed.	
Innovation description	On a river or creek a dam is set to divert surplus water from river or creek into accumulation lake, basin, channels or tubes. The solutions from the patent prevent flood (100%) and by applying this patent in the cities and towns, the streets would not be covered with water during the raining periods. This patent can also be applied for preventing the flood caused by sea.	
Intellectual property, Patent	Patent announcement BAP082676A	
Estimated total investment cost	For civil engineering companies willing to do works according to the patent solutions, the estimated costs depend on an area where the patent solutions will be built.	
Inputs required from foreign partner	Value	Description
	Negotiable	This patent is for sale to: Businessmen's; Countries, regions, cities, villages, municipalities; Civil engineering companies; Insurance companies; Landlords; All interested persons, companies and organizations.
Form of cooperation with foreign partner	Selling the patent or licence for using the patent.
